- Free-standing or built using your existing walls and ceiling
- Easily modified as your needs change
- Provides security, privacy and unsurpassed functionality
- Delivered promptly, according to your schedule
- Many options and add-ons to suit your exact specifications

Top-Notch Environment Control

A hardwall cleanroom is a top-notch solution in any industry where controlling particulate is a primary concern. Its superior contamination, temperature and humidity control creates an environment for maximum productivity that complies with Class 1—Class 10,000 regulations. A hardwall cleanroom is an ideal system for recirculating air with plenums and raised floors.

Easily Modify and Upgrade

A hardwall cleanroom can be free-standing or built utilizing a portion of your existing walls. This gives you the flexibility to modify, expand, upgrade or move the room as your needs change, making it a long-term investment for your organization.

Built to your Exact Specs

Every organization has different requirements for cleanrooms. Our cleanroom engineers work closely with you to determine your needs, sort out the options and create a customized room. Options for filtration, air flow and environment control are designed to make your cleanroom particle free no matter what its size. Walls and frames can be fiberglass, stainless steel, plastic laminate, vinyl or aluminum. Pass-thrus, gowning chambers, room dividers and sliding doors make your cleanroom an efficient space for your staff and help increase production. A complete list of options is included on page two.

Easy to Install and Maintain

Your hardwall cleanroom is pre-fabricated at the factory for quick installation, usually in 2-3 days. Easily install the room yourself with complete instructions, or have our crew do it for you. Ångström Technology construction specialists manage the entire project, from delivery and installation to clean up, with minimal disturbance to your staff. Ongoing maintenance is simple, with easy-to-clean panels and other components.

Durable, Strong and Secure

A heavy-duty frame interlocks with a ceiling grid for superior strength that won't sag over time. A variety of frames, wall panel materials and doors are offered to meet your requirements for strength, chemical resistance and overall security.
