

# Rigidwall Cleanrooms

## Versatile Clear-Panel Cleanrooms

- Class 100—Class 100,000 contamination control
- Visually appealing, affordable and highly functional
- Modular, pre-fabricated system installs quickly and easily
- Free-standing or built using your existing walls and ceiling
- Modify or expand the room on-site as your needs change
- Portable, reusable system stays with you if you move
- Many options to suit your exact specifications

### Complete Contamination Control

A rigidwall cleanroom is a versatile solution in any industry where controlling particulate is a priority. It combines superior contamination control with a comfortable working environment for maximum productivity. Outside air gets cleaned when it flows through ultra-quiet HEPA filters, then flows through the room and is vented back outside. This 'once-through' air flow creates positive outward air flow to ensure a contaminant-free space that complies with Class 100—Class 100,000 regulations.

### Versatile and Flexible System

A rigidwall cleanroom is free-standing or can be built utilizing a portion of your existing walls. This gives you the flexibility to modify, expand or move the room as your needs change, making the room a long-term investment for your organization.

### Easy to Install and Maintain

Your rigidwall cleanroom is pre-fabricated at the factory for quick installation, usually in 2-3 days. Easily install the room yourself with complete instructions, or have our crew do it for you. Ångström Technology construction specialists manage the entire project, from delivery and installation to clean up, with minimal disturbance to your staff. Ongoing maintenance is simple, with easy-to-clean panels and other components.

### Durable, Long-Lasting Design

A powder-coated steel tube frame interlocks with an extruded aluminum ceiling grid for superior strength that won't sag over time. A variety of panel materials are offered to meet your requirements for chemical resistance, light wavelength and intensity, overall strength and security.

### Easy on Your Bottom Line

A rigidwall cleanroom is affordable, and priced comparably to traditional softwall rooms. Plus, your rigidwall cleanroom is completely modular, so it goes wherever you do.

### And It Looks Good Too!

Crystal-clear, completely flat wall panels create a cleanroom that's more aesthetically appealing than regular softwall rooms. Totally transparent walls make it easy to monitor activities in the room and showcase your work to executives, visitors and inspectors.
